SUMMARY

Graduating Computer Science student (expected November 2026) with full-stack experience across Laravel, Django, and relational databases. Led a five-person intern team delivering an Electronic Medical Records mobile application, contributed to its data model, and reviewed back-end work. Comfortable working inside an existing multi-developer codebase and learning an unfamiliar framework on the job.

TECHNICAL SKILLS

- **Languages:** JavaScript, PHP, Python; C++ (academic coursework)
- **Back-end:** Laravel (PHP), Django (Python); REST APIs
- **Databases:** MySQL, PostgreSQL; relational schema and ERD design
- **Front-end:** HTML, CSS, JavaScript, Bootstrap, Tailwind CSS
- **Tools:** Git and GitHub — branching, pull requests, merge conflict resolution
- **Working knowledge:** React Native (Expo), Flutter, Unity3D

INTERNSHIP EXPERIENCE

Web & Mobile Developer Intern — Team Lead

May 18 – June 20, 2026

Crave Digital Advertising Supplies and Services • 300 hours

- Led a team of five interns, coordinating task assignments and overseeing project integration
- Helped map the entity-relationship diagram for the Electronic Medical Records system
- Reviewed back-end work and identified two defects before release: administrator roles hard-coded to fixed accounts, which broke when the client operated across multiple clinics, and patient records visible to every user rather than restricted per practitioner
- Built the mobile front-end in React Native (Expo) and developed back-end features in Laravel where full-stack work was required
- Managed version control in Git, merging team contributions into a single working codebase

SELECTED PROJECTS

NorthLink | Django • PostgreSQL • Team project

Property management platform with modules for properties, tenants, inquiries, maintenance and billing, plus an admin dashboard. [View on GitHub](#)

Sibs Style Beauty Lounge | Laravel • MySQL • Client project

Booking and scheduling system for a Dubai salon, built to requirements gathered directly from the owner: matches services against staff availability and prevents double-booking. Delivered and reviewed with the client, who returned requesting a further revision.

GitPal | Python • Solo project

Terminal-based Git and GitHub assistant that guides users through staging, committing, pushing and remote setup, and explains Git errors in plain language. Open source under MIT. [View on GitHub](#)

Undergraduate Thesis | Unity (VR) • Team lead, 4 members • In progress

VR-based obstetric instructional tool. Gathered procedural requirements directly from the university's nursing department, and contributed to the decision matrix and rule-based algorithm that drives scenario outcomes.

EDUCATION

University of Saint La Salle (USLS)

2023 – Present (Expected November 2026)

Bachelor of Science in Computer Science

Dean's List — Second Honors (AY 2023–2024)

Technological University of the Philippines – Negros, Talisay

2020 – 2022

Engineering Technology

CAMPUS & COMMUNITY INVOLVEMENT

- Member, Computer Science Society (CSS), USLS
