

PROJECT OVERVIEW

CraveCare

An e-medical record app for multi-branch clinics

THE PROJECT

Built during my Web & Mobile Developer internship at Crave Digital (May–June 2026), where I was also team lead. Doctors use it to manage patients, queue walk-ins, write prescriptions and medical certificates, and keep a drug reference.

Stack: Expo / React Native + TypeScript · Node.js / Express · Prisma · MySQL · JWT auth

TWO PROBLEMS I SOLVED

- **Multi-clinic roles.** Admin roles were hard-coded and broke once the app had to support more than one clinic. I restructured the data so staff belong to a specific clinic and get their permissions from it.
- **Patient privacy.** Every doctor could see every patient. I traced it to the API returning unscoped data and fixed it on the back end, so each doctor only receives their own patients.

01 Multi-clinic access

Staff belong to clinic branches, and each session runs inside one active branch.

Clinic selection

Staff choose their assigned branch. Only active branches are accessible.

Doctor dashboard

Current queue, clinic management, and drug information in one place.

Switch clinic

Doctors can change their active branch mid-session without logging out.

02 Patients & queue

Each doctor only sees their own patients. The scoping is enforced in the API.

The 'Patient Records' screen features a green header with a back arrow and a settings gear. Below the header is a search bar labeled 'Search patients by name...'. The main content area is titled 'Patient Records (6)' and displays a list of six patient entries. Each entry includes a blurred profile picture, a status tag (e.g., 'old'), and text indicating gender, date of birth, age, and a phone number. To the right of each entry are 'Edit' and 'Delete' buttons.

Patient records

Searchable list scoped to the logged-in doctor, with new/returning tags.

The 'Current Queue' intake form has a green header with a back arrow and a settings gear. It is titled 'Input the details of your patient'. The form contains several input fields: 'Last Name', 'First Name', 'Gender' (with radio buttons for Male and Female), 'Birthdate' (with a date picker), and 'Civil Status' (with buttons for Single, Married, Divorced, Separated, Widowed, and Minor). Below these are fields for 'Height (cm)', 'Weight (kg)', 'Temp (°C)', and 'Blood Pressure'. At the bottom is a large green button labeled 'ADD TO QUEUE'.

Add to queue

Intake form for walk-ins: details, civil status, and vitals.

The 'Current Queue' allergies and contact screen has a green header with a back arrow and a settings gear. It contains several input fields: 'Height (cm)', 'Weight (kg)', 'Temp (°C)', and 'Blood Pressure'. Below these is a text area for 'Allergies' with the placeholder 'List any allergies or type 'None...''. This is followed by a 'Patient's Email Address' field and a 'Mobile Number' field. At the bottom is a large green button labeled 'ADD TO QUEUE'. A green informational box at the bottom states: 'We will send a copy of the prescription to your patient's email or mobile number. If email or mobile number is not available, you may still continue and send it using other sharing options.'

Allergies & contact

Allergies are recorded up front. Prescriptions go to the patient's email or mobile.

03 Consultations

Prescriptions and medical certificates, generated and shared from the app.

Create prescription

New prescription, represcribe a previous one, or issue a medical certificate.

Represcribe

Patient summary with an allergy warning, diagnoses, and medications with dosage.

Medical certificate

Generated per patient, then sent by email or shared and printed.

04 Drug & disease reference

A structured reference the prescription screens draw from.

2:48

← Generics

Add a New Generic
Generic Name

e.g. Paracetamol

① Enter the generic (chemical) name of the medication.
Brands will be linked to this generic separately in the Brand Directory.

SAVE RECORD

Generics

Generic (chemical) medication names, stored once.

2:48

← Brand Directory

Add a New Brand
Brand Name

e.g. Biogesic

Generic Medication

Select a generic...

① Each brand must be linked to one generic medication.
If the generic doesn't exist yet, add it in the Generics screen first.

SAVE RECORD

Brand directory

Each brand is linked to exactly one generic, so the data stays consistent.

2:48

← Diseases

Add a New Disease
Disease Name *

e.g. Pneumonia

Description (optional)

Brief description of this disease

General Symptoms (optional)

Typical symptoms of this disease (general reference)

① General symptoms here are a reference for the disease itself.
Patient-specific symptoms are recorded separately during consultation when you attach this diagnosis.

← Back

SAVE DISEASE

Diseases

General disease reference. Patient-specific symptoms are recorded per consultation.
